

## **Equipois Inventor Garrett Brown To Be Inducted into Sports Broadcasting Hall of Fame**

September 15, 2009 – Equipois Inc. proudly congratulates Garrett Brown, inventor of Equipois’s zeroG® arm technology, for his upcoming induction into the Sports Broadcasting Hall of Fame.

In honoring Brown, the Hall of Fame noted that “Garrett Brown is the sports business’s premier inventor. As if inventing the Steadicam wasn’t enough, Garrett invented the Skycam, Divecams, and railcams. His foresight has changed the way we view sports today...There is no big event in sports that airs without one of his inventions.”

Brown’s zeroG® arm technology and tool-holding inventions, developed through three years of collaboration with Equipois, have revolutionized manufacturing by allowing workers to maneuver tools and parts as if weightless, but with total freedom of motion – thereby significantly reducing workplace injuries and increasing productivity. Introduced in 2008, zeroG® products are utilized by some of the world’s best known and most respected manufacturing companies and have garnered numerous industry awards.

Together with Brown, Equipois is developing next-generation zeroG® products that will increase safety, efficiency and quality for medical procedures, materials handling, and a range of other applications.

More information about Garrett Brown’s induction into the Sports Broadcasting Hall of Fame can be found at <http://www.sportsvideo.org/portal/hof/>.

### **ABOUT EQUIPOIS INC.**

*Equipois designs and manufactures patented technologies that allow tools, parts, materials and other payloads to be maneuvered as if weightless, but with full range of motion. The company’s zeroG® mechanical arm and gimbal systems are designed to support a range of manufacturing, heavy industrial, bioresearch, medical and other applications in order to reduce workplace injuries, boost productivity and improve quality.
